

The background of the slide features a close-up, high-resolution image of a wood grain, showing wavy, organic patterns in various shades of brown. A dark blue, semi-transparent rectangular overlay is positioned on the right side of the image, containing the title and submission information. A white L-shaped graphic element is located at the top-left corner of the dark blue area, consisting of a vertical line extending upwards and a horizontal line extending to the right.

Writing Better Prompts

INTRODUCTION TO PROMPT ENGINEERING

Content

Prompt engineering is the process of creating effective and detailed instructions for AI systems to generate accurate, useful, and creative responses. Well-structured prompts improve the quality of AI-generated outputs.

Key Points

Helps AI understand user requirements clearly

Improves response accuracy and creativity

Used in chatbots, automation, and content generation

Objective

Content

The objective of this task is to understand how different types of prompts affect AI-generated responses and how improving prompts leads to more accurate, clear, and meaningful outputs.

Small Points

Compare weak and improved prompts

Analyze AI-generated responses

Learn importance of clarity and specificity

Example 1 — Climate Change Prompt

Explain climate change.

Climate change is the long-term change in Earth's climate, including temperature, rainfall, wind patterns, and weather conditions. In recent years, climate change has mainly been caused by human activities such as burning fossil fuels, deforestation, industrial pollution, and excessive use of vehicles. These activities increase greenhouse gases like carbon dioxide and methane in the atmosphere, which trap heat and lead to global warming.

Climate change affects the environment in many ways. It causes rising temperatures, melting glaciers, sea level rise, floods, droughts, cyclones, and irregular rainfall. It also impacts agriculture, water resources, wildlife, and human health. Many species lose their habitats, and food production may decrease due to extreme weather conditions.

To control climate change, people should reduce pollution, use renewable energy sources like solar and wind power, save electricity and fuel, plant more trees, and adopt environmentally friendly practices. Governments and individuals must work together to protect the environment and ensure a safer future for coming generations.

Explain climate change in 3 simple bullet points for a 12-year-old student with an easy real-life example.

- Climate change means the Earth is getting warmer because of pollution from cars, factories, and cutting down trees.
- It causes problems like very hot summers, heavy rains, floods, droughts, and melting ice in cold places.
- Example: If a city usually has cool weather but now becomes extremely hot every summer, that is a sign of climate change.

Improved prompt

Weak prompt

Comparison

Weak Prompt	Improved Prompt
Generic response	Clear explanation
Difficult language	Simple language
No audience specified	Audience-focused

Example 2 — Artificial Intelligence Prompt

Tell me about Artificial Intelligence.

Artificial Intelligence (AI) is a technology that enables computers and machines to think, learn, and make decisions similar to humans. AI can analyze data, recognize patterns, solve problems, and even understand speech or images.

AI is used in many areas of daily life, such as virtual assistants, mobile phone face recognition, online recommendations, self-driving cars, healthcare, and chatbots. It helps make work faster, easier, and more accurate.

There are different types of AI, including machine learning and deep learning, which allow systems to improve automatically through experience and data. AI is becoming an important part of education, business, medicine, and technology.

📄 ⬆️ ↺ ...

Weak Prompt

Explain Artificial Intelligence to engineering students in under 150 words using real-world examples.

Artificial Intelligence (AI) is a branch of computer science that enables machines to perform tasks that normally require human intelligence, such as learning, reasoning, decision-making, and problem-solving. AI systems use data and algorithms to identify patterns and improve performance over time.

Real-world examples of AI include voice assistants like [Siri](#) and [Google Assistant](#), recommendation systems used by [Netflix](#) and [Amazon](#), facial recognition in smartphones, and self-driving cars. In healthcare, AI helps doctors detect diseases from medical scans. In engineering, AI is used in robotics, automation, predictive maintenance, and smart manufacturing. AI improves efficiency, reduces human effort, and supports faster and more accurate decision-making across industries.

Improved Prompt

Comparison

Weak Prompt	Improved Prompt
Broad output	Structured response
No word limit	Concise explanation
Generic information	Practical examples

Example 3 — Story Writing Prompt

Write a story.

Once upon a time, in a small village surrounded by hills, there lived a girl named Anaya. She loved fixing broken things. While other children played outside, Anaya spent hours repairing old radios, clocks, and fans with tools she found in her grandfather's workshop.

One day, a terrible storm hit the village and destroyed the power lines. The entire village was left in darkness. People were worried because the nearest town was far away, and help would take days to arrive.

Anaya remembered an old science book about wind energy. Using bicycle parts, scraps of metal, and an old motor, she worked through the night to build a small wind turbine. By morning, it produced enough electricity to light a few homes and charge phones.

The villagers were amazed. What started as a hobby had helped the entire village during a difficult time. From that day on, Anaya dreamed of becoming an engineer who could create inventions to help people around the world.

📄 ↗️ ↻️ ⋮

Weak Prompt

Write a 200-word suspense story set in a college hostel with a surprising ending.

The girls' hostel at Hillcrest College was usually noisy, but Room 309 had been silent for three nights. Rumors spread quickly after a first-year student claimed she heard whispers coming from inside the locked room at midnight.

Aisha and her friend Meera decided to investigate. Armed with a phone flashlight, they walked down the dim corridor just before midnight. The air felt strangely cold. As they approached Room 309, they heard faint tapping sounds from inside.

"Did you hear that?" Meera whispered nervously.

Aisha slowly pushed the door open. The room was dark and dusty, with old furniture covered in white sheets. Suddenly, the tapping grew louder. Their flashlight flickered. Meera screamed when she saw a shadow move near the window.

The girls ran toward the door, but it slammed shut on its own.

Then came a voice.

"Finally... someone came."

Terrified, Aisha turned around and pulled away the curtain near the window. Behind it sat an old projector.

+ Ask anything

Improved Prompt

Comparison

Weak Prompt	Improved Prompt
Random storyline	Clear theme
No structure	Detailed instructions
Less engaging	More creative output

Key Learnings

Points

- Specific prompts improve AI accuracy
- Detailed instructions generate better outputs
- Audience and tone influence responses
- Prompt engineering improves communication with AI systems
- Structured prompts produce more relevant and useful content

Final Observation

- Better prompts lead to better AI-generated results.

Conclusion

Content

Prompt engineering is an essential skill for effectively interacting with AI systems. Clear, detailed, and structured prompts help generate accurate, meaningful, and creative outputs. This task demonstrated how improving prompts significantly enhances the quality of AI-generated responses.

A close-up photograph of a wood surface, showing concentric growth rings in shades of brown, tan, and dark blue. The rings are curved and follow the shape of the wood piece.

Thank you
